Zobiris Playbook

Rules backed by tested evidence (Kraken fees included, rules written before results). Research guidance, not order authority.

#	Rule	Evidence	Source
1	**Only take trades worth more than the fee.** A Kraken round trip costs 0.4% (maker) to 0.8% (taker). Hold for days, not minutes, and use limit orders.	Every intraday BTC pattern tested moves the next 10–60 min by < 0.05% on average.	`RECOVERY_RESEARCH_VERIFICATION_2026-10-22.md`
2	**Don't buy alts while BTC is dropping.** After BTC falls 5% in 48h, alts keep trailing it.	20 drops: alts –1.7% vs BTC next day, –1.9% over 5 days, after fees.	`BTC_EVENT_CONDITIONAL_STUDY_2026-10-22.md`
3	**In a drop, keep the strongest alts and cut the weakest.** Strength = closest to the 30-day high.	Passed holdout: rank correlation +0.13, four times ordinary days. Live monitor runs daily.	same
4	**Avoid coins down 35%+ over 90 days.**	467 cases: median –5.2% vs BTC over the next 30 days.	`DELAYED_ROTATION_REPLAY_2026-10-22.md`
5	**Treat a flush as context, not an entry.** Buying the most-flushed alts lost to BTC after fees; Oct 18 was a rare outlier.	80 flushes over 14 months: –0.5% at 6h, no edge at 24–72h.	`ALT_FLUSH_EVENT_STUDY_2026-10-22.md`
6	**Don't trust a score until it's been scored.** Rotation score and opportunity score showed no positive skill; QUALIFIED didn't beat rejected coins.	47 weekly replays; live outcome memory.	`DELAYED_ROTATION_REPLAY_2026-10-22.md`, `LIVE_ENGINE_REVIEW_2026-10-22.md`

Useful context (not triggers)

• Quarter-hour marks bring bursts of trading and bigger moves on Kraken; avoid market orders in the first seconds.

• A BTC level that has sat untouched for hours is slightly more likely to break (+5–9 points), far from "almost definitely".

• Relative volume differs by exchange; judge it on Kraken.

Where the next edge is likely

Information charts don't show: futures positioning and liquidations, scheduled events (unlocks, upgrades, listings), and the owner's own calls, scored the same way as the models.
